

**Javier Caceres** is a Professor and MRC Investigator at the MRC Human Genetics Unit, Institute of Genetics and Cancer, University of Edinburgh. He studied for a B.Sc. and a Ph.D. in Molecular Biology both at the University of Buenos Aires in Argentina. In 1989, he moved to the USA to carry out postdoctoral research in the laboratory of Jim Dahlberg (University of Wisconsin-Madison), where he studied transcriptional control of small nuclear RNA genes. In 1991, he joined Adrian Krainer's laboratory at Cold Spring Harbor, where he worked on alternative splicing regulation. He joined the MRC Human Genetics Unit in 1997. His laboratory is interested on mechanisms of post-transcriptional regulation of gene expression. Their main focus is on the role of RNA-binding proteins (RNABPs) in gene expression and how alterations to RNA processing mechanisms can contribute to human disease. He serves in numerous international reviewing panels and Editorial Boards, and he is co-senior Editor of the RNA Journal, published by Cold Spring Harbor Laboratory Press. He was elected as a member of the European Molecular Biology Organization (EMBO) in 2008, a fellow of the Royal Society of Edinburgh in 2011 and a member of the Academia Europaea in 2016.
